

**SmartVerge Ambidextrous Dry Verge System - Overview**

CODE **GPPV-AMBI**

**Description**

The SmartVerge Ambidextrous dry verge system is a fast and effective method for finishing the verge of roof that has been fitted with small or large format, interlocking tiles. The individual verge units cap the end of each course of tiles to provide an unobtrusive, weatherproof cover whilst preserving the 'stepped' appearance of the roof tiles. The system is mechanically fixed and can be installed in all weather conditions without the need for mortar.

The units have been designed to be compatible with both small and large format interlocking concrete tiles available in the UK.

The angled or round Ridge End Caps can be used to protect the end of the ridge while the Eaves Closure fixes at the base of the verge, securing the first unit and preventing access for birds and large insects. The batten end clip allows for a secure nail fixing into the end grain of the tiling battens.

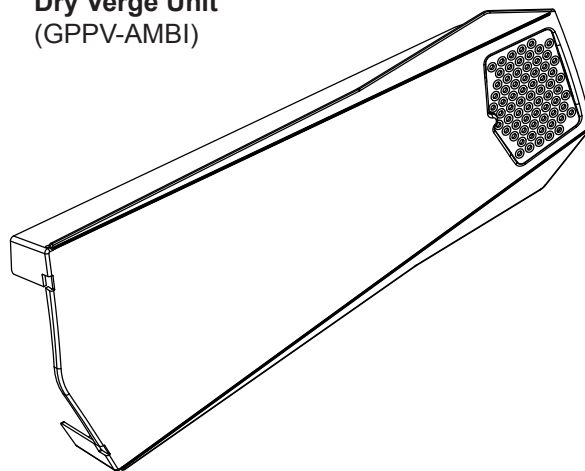

**Features**

- Fast & easy to install, mortar-free, dry fix verge system.
- Suits small and large format concrete interlocking tiles.
- Can be fitted with a batten gauge of 255mm to 345mm.
- Ambidextrous units suit both hands of the verge.
- Protects the verge from exposure to the elements.
- Also helps to prevent the entry of birds and large insects.
- Suitable for both new build and refurbishment details.
- Can be installed on roof pitches between 15° and 55°.
- Drains moisture away from the wall to prevent staining.
- Manufactured from UV stabilised polypropylene.
- Available in a range of colours to suit various roof types.
- Meets BS 5534 requirements for mechanical fixing.
- System independently wind tunnel tested at the BRE.
