

How to mix and apply Resi-Dual from Resiplay

make sure all surfaces are properly clean and prepared

Step 1

Thoroughly mix part A & B together in a large tub.

Add 25 kgs of sand then mix to an even consistency.

Using one of the empty resin tubs, add two tubs of water.
Mix until a porridge like consistency is achieved.

Step 2

Wet the area to be pointed starting at the highest level

Step 3

Wet the area to be pointed starting at the highest level
Empty half the contents of the tub onto surface then
immediately brush the mortar mix across the
whole area, including edges .

Brush across joints until full.

After approximately 10 minutes do final
sweep to remove any surplus sand.

Keep off until fully dry
